Experiments...

▶ Fixing some issues. Testing outputs with sequential BFE. Identical outputs.

▶ Proof of concept using the dense area of the L.A. dataset (2671 points).

▶ Using just one node with 10 cores.

▶ Using the same partitioning squema to 40 partitions (Quadtree with max entries = 250) for both methods.

▶ Testing BFE and Clique/MBC (CMBC) alternatives at local level.

▶ Varying epsilon and mu parameters.

Results...

Performance by epsilon

Results...

Performance by mu
